

ABSTRACT OF THE DISCLOSURE

A flexible carrier for carrying a plurality of containers, such as soft drink and other beverage containers, is formed from a polymer composition which provides the carrier with improved recovery, tensile strength and tear resistance. The polymer composition includes about 50-99% by weight of a low density ethylene polymer having a density of about 0.910-0.950 grams/cm³ and about 1-50% by weight of a single site catalyzed ethylene-alpha olefin copolymer plastomer having a density of about 0.850-0.905 grams/cm³.
